

Steripette

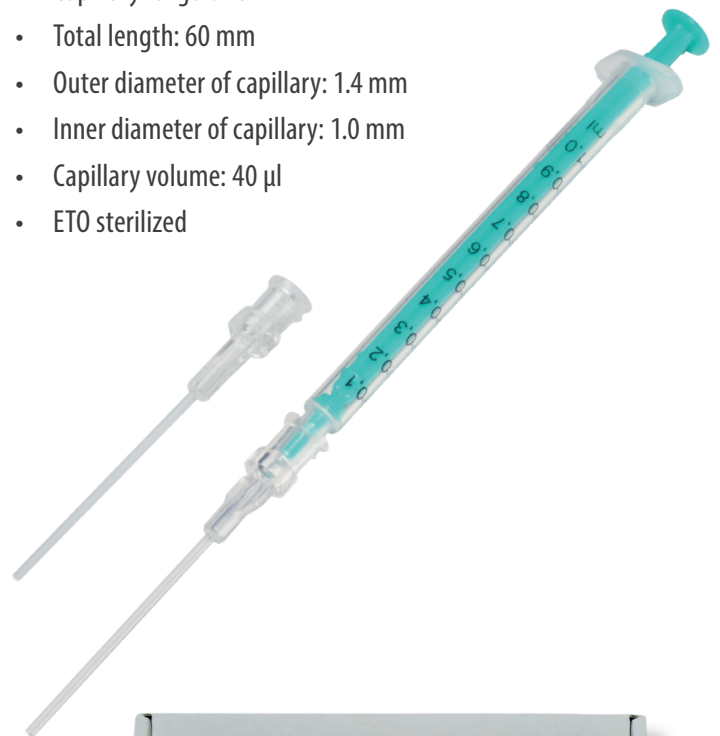

Single use, disposable capillary pipette for collecting oocyte cumulus complexes and for transferring oocytes/embryos between dishes.

Your benefits

- Rounded tip for gentle manipulation of oocytes and embryos
- Plastic capillary cannot break - it is flexible and tough
- No scratching of the bottom of culture dishes as with glass capillaries
- Integrated Luer adapter for easy connection to commercially available single use syringes - 1 ml syringes are most convenient
- Individually packed for single use
- Mouse embryo assay (MEA) tested
- LAL tested for endotoxicity
- Tested for bioburden

Technical features

- Capillary length: 40 mm
- Total length: 60 mm
- Outer diameter of capillary: 1.4 mm
- Inner diameter of capillary: 1.0 mm
- Capillary volume: 40 μ l
- ETO sterilized

Steripette for manipulation of embryos and oocytes, sterilized, 50/package [REF.: 19025/0050](#)
